: Project AP92, Kiev | An apartment for a whole floor

Located right in the centre of Kiev, on one of the top floors of the building you can find a dream apartment. It occupies the entire floor and is surrounded by a spacious balcony on all sides. The lion's share of 630 m² planks have a length of five metres with a width of 30 cm. Such dimensions are extremely dimensionally stable in construction and can even be installed on top of underfloor heating.

The Zasutsky team of Ukrainian architects selected a reduced décor with soft, bright colours. As according to the client, a natural oiled variant was specified. „For us it was important visually as far as possible to avoid borders in order to reach a natural haptic and the large-sized planks was the logical choice for our project”, explains the Project team.

: News | mafi Domino nominated for German Design Award 2017

mafi's floor innovation „Domino Larch Vulcano“ was nominated for the German Design Award 2017. In the scope of this award ceremony unique design trends are discovered, presented and appreciated. New product ideas can also be awarded, as can their manufacturer or designer.

End-grain floors already have a long tradition in Austria: because of their particularly high robustness they have been used for many years in, for example workshops. For the Domino Larch Vulcano floor, mafi has modern re-interpreted this historical style.

The chemical-free thermo treatment of the natural wood and finishing with natural oils position the genuine wood floor experience in the foreground. [mafi.com]

: Technology | Stair Nose profile E improved

mafi stair noses enjoy ever greater popularity. In different profiles they can be fitted quickly and stably. The new milled groove ensures optimal precision fitting for all mafi planks in the thickness of 16, 19 and 21 mm.

The stair nose type E can now be used in both directions, thanks to this milling and offers new solutions for all visible plank closings such as on stairs, landings or window sills. [mafi.com]
