

# Heat conduction

---

Thermal transfer is usually measured along with the thermal resistance. Mafi floors have the following values depending on the individual product:

Guidelines for Heat Transfer Resistance:

- 10 mm softwood floors 0.08 m<sup>2</sup> K/W
- 10 mm hardwood floors 0.10 m<sup>2</sup> K/W
- 16 mm softwood floors 0.11 m<sup>2</sup> K/W
- 16 mm hardwood floors 0.13 m<sup>2</sup> K/W
- 19 mm hardwood floors 0.16 m<sup>2</sup> K/W
- 21 mm softwood floors 0.16 m<sup>2</sup> K/W

Thanks to the oiled, natural surface of the mafi natural wooden floors, the body temperature is not as quickly transferred as it would be with lacquered surfaces or stone. Therefore, mafi floors always appear warm especially under barefeet.

**Natural wooden floors made in AUSTRIA**
